

A Professional Extractor®

Coffee Brewing System

# CBS-2021

## WHAT IT HAS

## HOW IT HELPS

Manufactured in commercial-grade stainless steel and plastic construction, CBS-2021 is fully programmable and has all the most important characteristics of a professional Extractor® Coffee Brewing System in a compact, yet durable, stylish version.

## Pulse-Brew® Panel

- ☛ Pulse-Brew® System, or Intermittent Spray Shower, dispenses hot water over the coffee bed for a precise amount of time and then turns off.
- ☛ **By controlling the amount of time the water stays in contact with the ground coffee, it allows the perfect extraction with an even and full saturation of the coffee bed.**

## Hot Water Faucet

- ☛ Hot water faucet is controlled electronically.
- ☛ **It allows to dispense hot water based on selected temperature of water in the tank.**

## Pre-Wetting Option

- ☛ Pre-Wetting option allows programmable initial amount of hot water to be dispensed before the start of the brew cycle.
- ☛ **It prepares the coffee bed for an optimal extraction, reducing astringency and bitterness.**

## Drip Delay Feature

- ☛ Drip Delay feature.
- ☛ **When activated, it allows to determine when decanter or dispenser is ready to be removed.**

## Time & Temperature

- ☛ Brew Time and Temperature.
- ☛ **It allows to make brewing adjustments based on your recipe variables.**

## Electronic Panel

- ☛ Newly designed and fully programmable LCD Electronic Command Panel.
- ☛ **It allows to effortlessly calibrate the Extractor® brewer and adjust the parameters.**

## By-Pass Option

- ☛ By-Pass Option allows selecting a percent of water not to get in contact with the coffee grinds.
- ☛ **If selected, it attenuates the final extraction (used mostly with fine grinds).**

## No-Brew Feature

- ☛ Low-Temp/No-Brew feature prevents brewing with tepid water.
- ☛ **If activated, it allows brewing with the correct water temperature, avoiding under extraction that would be attained by using cold water.**

## Additional Options

- ▶ Iced-Tea Brew Basket. **With its narrow spout allows to brew tea properly for a perfect iced tea.**
- ▶ One or two warmer option. **For added flexibility.**
- ▶ Quad-warmer option. **For higher volume operations.**
